

Substrate and Mirror Preparation

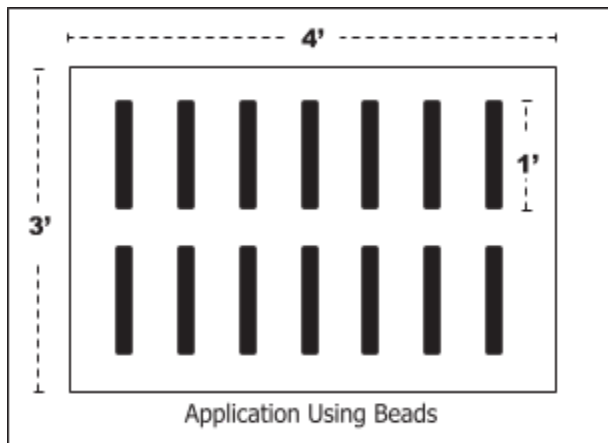

- 1** Read instructions **completely** before applying SuperSet Mirrors & More.
- 2** Make sure surfaces are free of dust, clean and dry. Do not use on a painted surface, wall covering or treated wood.
- 3** For best adhesion, all materials should be at room temperature 72°F, (22°C). Do not apply at a temperature below 59°F (15°C) or above 95°F (35°C).

4 It is the user's responsibility to determine SuperSet's suitability for different surfaces.

5 PERMANENT MECHANICAL FASTENERS MUST BE USED FOR ALL MIRROR AND HEAVY MATERIALS.

Directions for use of Palmer *SuperSet* Mirrors & More

- 1** Unscrew nozzle and set aside.
- 2** Cut tip off cartridge above the threads.
- 3** Replace nozzle.

4 Cut nozzle to desired bead size.

5 Place cartridge in gun.

6 Apply SuperSet Mirrors & More in linear vertical beads across the application. Leave space between beads to prevent overlap when pressed into place. Do not apply too close to the edge to prevent "squeeze out". Do not spread before pressing into place.

7 Press firmly into place making good contact between all surfaces. Compress mastic no less than 1/16" allowing air circulation to cure properly. Each vertical bead should spread to approximately 2 inches (5 cm) in width. Curing time will depend on temperature, humidity, type of substrate and amount of air that can reach the mastic. 48 hours minimum.

8 With minimum coverage, one cartridge will install approximately 20 square feet (1.9 square meters) of mirror.

9 Cleanup can be done with mineral spirits.

10 For ceiling applications and technical questions, please contact Palmer Products at 800.431.6151 or palmer@mirro-mastic.com. The SDS and directions in French and Spanish are available at palmeradhesives.com
